quentinsauvage.github.io

Gameplay programmer for five years, I am passionate by development techniques applied to video games. During my career, I've learned about them through collaborative work with people from a wide range of jobs and I am now seeking a new opportunity to continue in this way.

SKILLS

Unity

Unreal Engine

Godot

C#

C++

Version control (Git, Plastic SCM)

AR/VR/MR

Monday (project management)

LANGUAGES

French: Native

English : Fluent

HOBBIES

Guitar/Bass

Video games

Music

EDUCATION

MASTER'S DEGREE GAME ENGINEERING

Faculty of sciences Jean Perrin, Lens, 2018 – 2020

BACHELOR'S DEGREE IN COMPUTER SCIENCE

Faculté des sciences Jean Perrin, Lens, 2016 – 2018

DUT IN COMPUTER SCIENCE

IUT of Lens, 2014 – 2016

WORK EXPERIENCE

GAMEPLAY PROGRAMMER (UNITY / C#)

Atypique Studio, March 2021 – December 2025

Conception, prototyping and continuous development of the turn-based tactical game *Noara: The Conspiracy*.

- Integration and development of core mechanics de jeu as well as playable units and their skills.
- Networking and player interactions handling (social interaction, matchmaking, leaderboards, ingame synchronization).
- Steam integration and deployment.
- Backend integration (player connection, inventory, friend lists, events, etc...).
- Conception and redesign of the game UI.
- Worked in cooperation with GD and QA teams to ensure the game works properly.

AR/VR DEVELOPER, INTERN (UNITY / C#)

Audace Digital Learning, June 2020 – November 2020

- Conception and development of proofs of concept using augmented reality, VR serious games and simulators.
- Development of a mobile FPS online using *Apple's ARKit* to create collisions based on the surrounding space.
- Development of an helping app with persistent text notes placed in the surrounding space using *ARFoundation*.
- Joined a team of developers to create a VR simulator to train people on the different ways of using extinguishers in a fire.
- Migration to a newer Unity version of a serious game training the player on nosocomial infections using quiz and various interactions inside a virtual hospital.

PROGRAMMER, INTERN (C++)

Lens Computer Science Research Lab, April 2019 – June 2019

- Created an incremental and autonomous debugger for constraint satisfaction problems solving.
- Developed integration and unit tests to ensure the program reliability.

PERSONAL EXPERIENCE

Multiple personal and school projects including:

- Various game jams (*Unity / UE / Godot*)
- Remake of the FPS *Descent (UE)*
- Online puzzle game (*AndroidSDK / C++*)
- *Online Bomberman (Java / C++)*
- 2D Platformer (*SFML / C++*)
- Racing game with AI-controlled vehicles (*Unity*)
